

# Solutions for Alyssa’s Law Compliance

Comprehensive and Effective Wireless Solutions from Nextivity, Global Leader in Indoor Connectivity and Critical Communications.

## WHAT to know

States around the country are adopting versions of Alyssa’s Law, a collection of legislative mandates designed to improve school safety and emergency communications. While it varies by state, Alyssa’s law legislation generally requires schools to adopt safety measures like wearable panic buttons and ensure that they have effective two-way radio coverage for first responders.

Some states are offering funding that corresponds with these new requirements to help schools implement programs that improve safety for students, teachers, staff, and visitors.

## HOW to comply

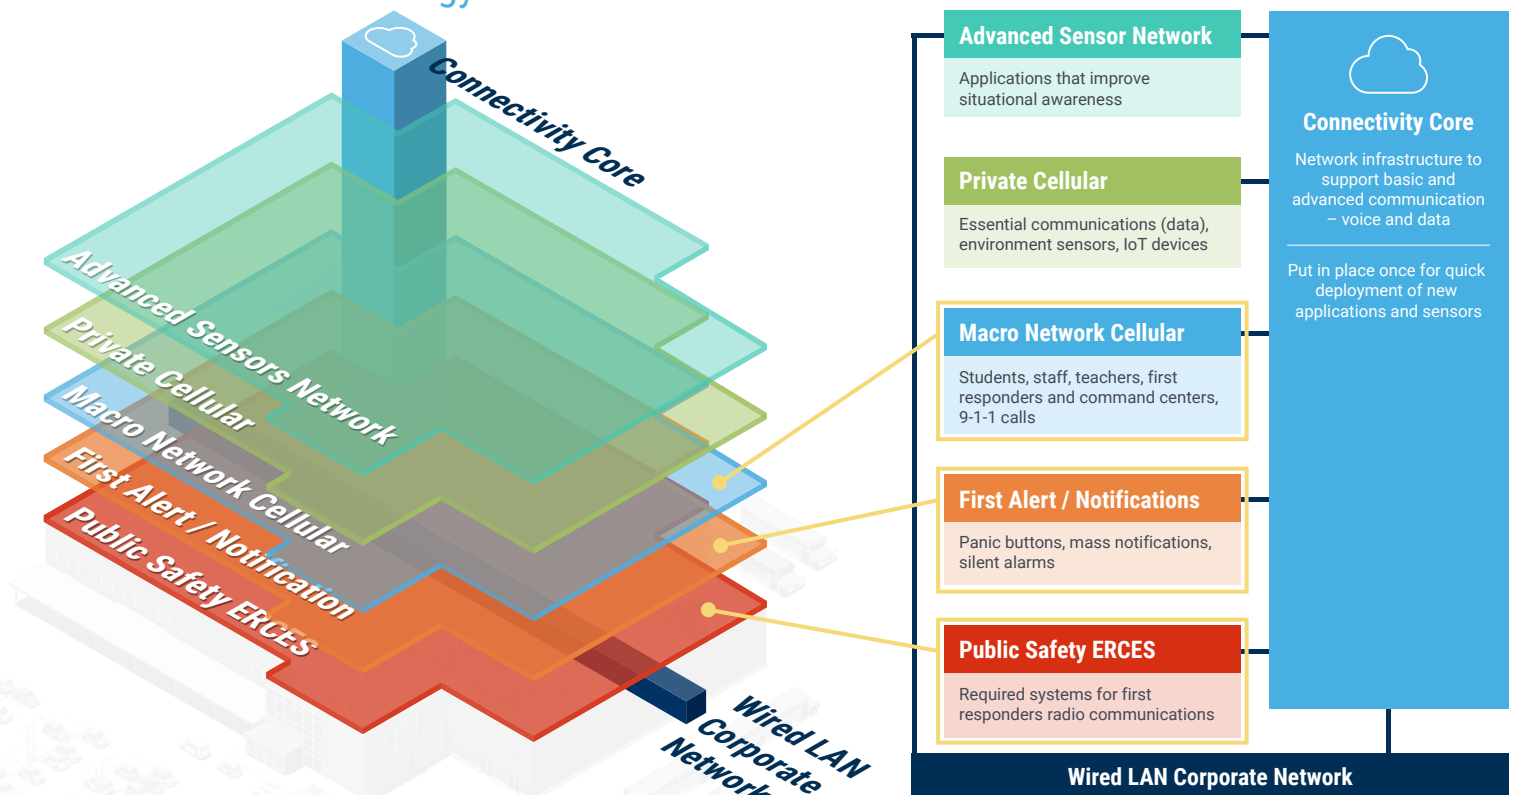

Our CEL-FI and SHIELD solutions provide cellular or two-way radio coverage with our smart boosting technology. Our solution includes proprietary SMART SERVER ANTENNAS that do double duty, supplying required radio and/or cellular coverage and providing connectivity for wearable panic buttons. You get best-in-class coverage, for 100% compliance, in a single system.

## WHO can help

Nextivity, alongside our local expert partners, will help you navigate the requirements by:

- Guiding you through the complexity of deploying network infrastructure, communication hardware, panic buttons, and requisite software.
- Integrating the system with existing platforms, if needed.
- Working with you to access funding and use purchasing vehicles such as OMNIA, NASPO, and TIPS.
