

Cellular Coverage, Private 5G, and IoT Networks for Factories

Nextivity has been solving indoor connectivity issues for enterprise customers since 2016.

Proven

to Improve Efficiency

As factory systems continue to evolve, secure, no-lag communication infrastructure becomes a must-have to realize efficiency gains, protect people and data, and monitor operations and building controls.

Hassle-Free

Installation for 1M+ ft² sites

Design Once, Support Everything

Shared infrastructure,
future-ready RF planning

WHY?

- Operate AGVs and other systems up to 30% faster with cellular connectivity (vs. Wi-Fi)
- Monitor building controls and indoor environment for health, safety, and cost avoidance purposes
- Mission-critical data and apps onto Private 5G for security and speed
- Use panic / call buttons to manage both routine and emergency alerts
- Detect the presence of workers in isolated areas for health and safety
- Detect leaks near fluid storage areas or cooling equipment
- Track and monitor assets such as forklifts, including battery levels, to ensure readiness

Efficient Reliable Wireless Connectivity

- Cellular coverage throughout for employees, contractors, and visitors
- Improve efficiency across operations
- Manage / reduce regulatory and safety risks
- Implement or expand smart building controls

Flexible, Scalable Layered Connectivity

- **Public Cellular** connects people
- **Private 5G** connects machines
- **IoT Networks** connect insights to action
